Florida Population: Census Summary 1990

Introduction

According to the U.S. Bureau of the Census, Florida's resident population on April 1, 1990, was 12,937,926. Although this number is considered to be final at the present time, it and the other 1990 population counts published here are subject to possible adjustment for census undercount or overcount. The U.S. Department of Commerce is currently considering whether to make such adjustments, and will announce its decision and publish the adjusted counts (if any) by July 15, 1991. It is also possible that final numbers for a few places will be different from those published here because of the correction of enumeration or geographic allocation errors. Based on past experience, however, we believe that changes due to the correction of errors are likely to be small in number and in magnitude.

The population numbers published in this booklet refer to permanent residents only. According to Census Bureau guidelines, a person is counted as an inhabitant of his or her usual place of residence, or the place that person lives and sleeps most of the time. Temporary Florida residents such as tourists and snowbirds are thus excluded from the Florida numbers, being counted as residents of other states or countries. If they reside in Florida on a permanent basis, persons from foreign countries (except those representing foreign governments) are counted as Florida residents regardless of their legal status. College students, military personnel and inmates in penal institutions are counted as residents of the cities and counties where they live while in college, the military or prison, not as residents of their "hometowns."

Data sources

Except for data on births, deaths and migration, all the population data in this booklet were provided by the U.S. Bureau of the Census. For a number of cities and counties, the population numbers shown here for 1960, 1970 and 1980 differ from those originally published by the U.S. Bureau of the Census because of the correction of errors found in the decennial census counts. Some of the 1990 numbers may likewise be corrected during the coming decade, and all are subject to possible adjustment for undercount or overcount.

Data on births and deaths were provided by the Florida Department of Health and Rehabilitative

Services, Office of Vital Statistics. Data on net migration were calculated by the Bureau of Economic and Business Research at the University of Florida.

State and regional trends

Florida continues to be one of the most rapidly growing states in the nation. Its population grew by 3.2 million during the 1980s, the second largest absolute increase of any state. In percentage terms, Florida's growth rate of 32.7 percent was the fourth largest of any state. During the 1980s Florida passed Ohio, Illinois and Pennsylvania to become the fourth largest state in the nation; in 1950 Florida was only the twentieth largest state. Rapid population growth is clearly not a recent phenomenon in Florida; in fact, Florida has been one of the four fastest growing states in every decade since 1920.

The 1990 Census confirmed the continuing population shift from the Midwest and Northeast to the South and West regions of the United States. The U.S. resident population was 248,709,873 in 1990, an increase of 22.2 million (9.8 percent) since 1980. Most of this increase occurred in the South and West. The South grew by 10.1 million (13.4 percent) and the West by 9.6 million (22.3 percent), while the Northeast grew by 1.7 million (3.4 percent) and the Midwest by only 803,000 (1.4 percent). The South is the most populous region of the country, with 85,445,930 residents in 1990 (34.4 percent of the total population), followed by the Midwest with 59,668,632 (24.0 percent), the West with 52,786,082 (21.2 percent) and the Northeast with 50,809,229 (20.4 percent).

California had by far the largest absolute population increase of any state during the 1980s, growing by more than 6 million residents. Florida and Texas also had large increases of 3.2 million and 2.8 million respectively. The nine states with the largest absolute population increases were all in the South and West regions of the United States. At the other end of the spectrum, four states and the District of Columbia lost population during the decade, with the largest losses occurring in West Virginia (156,167) and Iowa (137,053).

Five states grew by more than 25 percent during the decade. Nevada had the highest growth rate (50.1 percent), followed by Alaska (36.9 percent), Arizona (34.8 percent), Florida (32.7 percent) and

California (25.7) percent. Of the fifteen states with the highest percentage growth rates, nine were in the West, five in the South and one in the Northeast.

County trends

Rapid population growth occurred in many counties in Florida between 1980 and 1990. More than half of Florida's counties grew by more than 30 percent during the decade, and fifty-nine of the state's sixty-seven counties grew by more than the national growth rate of 10 percent. Three counties more than doubled in population size (Flagler, Hernando and Osceola), while another twelve counties grew by more than 50 percent (Charlotte, Collier, St. Lucie, Citrus, Gilchrist, St. Johns, Lee, Seminole, Marion, Clay, Martin and Indian River). These very rapidly growing counties are found up and down the Florida peninsula, on both coasts and in the interior parts of the state. At the other end of the spectrum, only eight counties grew by less than 10 percent during the 1980s: Gulf, Holmes, Jackson, Jefferson, Taylor, Union, Hardee and Gadsden. Seven of these counties are in the northern part of the state.

In terms of absolute population growth, the largest increases occurred in southeast Florida. Dade, Palm Beach and Broward counties each grew by more than 237,000 residents during the decade. Another eight counties grew by more than 100,000: Orange, Hillsborough, Lee, Brevard, Pinellas, Volusia, Seminole and Duval. More than 60 percent of the state's population growth occurred in these eleven counties. Twenty-nine counties had increases of less than 10,000 residents during the decade. Most of these counties are in north Florida and the Panhandle. Gadsden and Hardee were the only counties to lose population during the decade.

City trends

Florida is a highly urbanized state. More than 90 percent of Florida's population lived in metropolitan areas in 1990, and many others lived in small and medium-sized towns in nonmetropolitan counties. Only a tiny fraction of Florida's population may be truly classified as rural.

Much of Florida's population growth during the 1980s, however, occurred outside the boundaries of incorporated cities and towns. The populations of unincorporated places grew by 2,032,021 (45.1 percent) between 1980 and 1990, whereas the population of incorporated places grew by only 1,158,944

(22.1 percent). Less than half (49.5 percent) of Florida's residents lived in incorporated places in 1990, down from 53.8 percent in 1980 and 60.3 percent in 1970. The populations of incorporated cities and towns are clearly declining as a proportion of Florida's total population, while the populations of urban fringe areas outside those cities and towns are increasing.

Incorporated cities and towns show much more variation in population growth rates than do counties. Of the 390 incorporated places in Florida, 33 more than doubled in size between 1980 and 1990; 35 grew by 50-100 percent; 54 grew by 25-50 percent; 157 grew by less than 25 percent; 108 lost population; and 3 did not exist as incorporated places in 1980.

Incorporated cities and towns also exhibit a great deal of variability in terms of population size. Nine incorporated places had more than 100,000 residents in 1990; 19 had 50,000-100,000; 90 had 10,000-49,999; 104 had 2,500-9,999; 70 had 1,000-2,499; and 97 had less than 1,000. Although large cities account for the majority of the population living in incorporated places in Florida, small towns clearly account for the large majority of such places.

Components of growth

There are only four components of population growth: births, deaths, immigration and outmigration. Births and immigration raise the size of a population, whereas deaths and outmigration lower it. The overall growth (or decline) of a population is therefore determined by the relative magnitudes of its births and deaths, immigrants and outmigrants.

Florida had more than 1.6 million births during the 1980s, but also had almost 1.2 million deaths for a net natural increase (i.e., the excess of births over deaths) of 421,000. This accounted for a very small proportion (13.2 percent) of Florida's total population growth during the decade. The remainder of Florida's growth was accounted for by net migration, (i.e., the excess of immigrants over outmigrants). Net migration into Florida was almost 2.8 million during the 1980s and accounted for 86.8 percent of the state's growth. This stands in sharp contrast to the experience in most states, where net migration is small or even negative.

The components of growth vary a great deal from county to county in Florida. Net migration was positive for all but five counties in Florida during the 1980s and was greater than 100,000 in nine counties:

Palm Beach (274,629), Broward (224,093), Dade (206,404), Pinellas (159,878), Orange (159,306), Hillsborough (131,728), Lee (126,086), Volusia (115,730) and Brevard (110,521). On the other hand, net migration was less than 10,000 in thirty-one counties.

Natural increase also varied a great deal from county to county during the 1980s, ranging from 105,181 in Dade County to negative 36,750 in Pinellas County. Fifty-five counties had positive natural increase (i.e., more births than deaths) while twelve had negative natural increase (i.e., more deaths than births). All counties with negative natural increase had large proportions of older people; consequently, they had relatively high death rates and low birth rates.

Summary of contents

Table 1 of this booklet shows the 1990 and 1980 populations of each county and incorporated city in Florida, along with absolute and percentage changes between 1980 and 1990. Table 2 shows the 1990 population by race and Spanish origin for the state and each county. Table 3 shows the components of

growth (births, deaths, net migration) for each county and the state between 1980 and 1990. Tables 4-6 show population in 1960, 1970, 1980 and 1990 and decade percentage changes for counties, Metropolitan Statistical Areas and planning districts, respectively. Table 7 shows county populations ranked by population size in 1990 and each county's share of state population in 1970, 1980 and 1990. Tables 8 and 9 show counties ranked according to their absolute and percentage population increases between 1980 and 1990. Table 10 shows counties ranked by population density (persons per square mile) in 1970, 1980 and 1990. The next three tables show the top 100 cities in Florida ranked by 1990 population size (Table 11), absolute population increase between 1980 and 1990 (Table 12) and percentage population increase between 1980 and 1990 (Table 13). Table 14 shows the population of states and regions in the United States for 1980 and 1990. Figures 1-3 show graphically the absolute and percentage population increases of Florida counties from 1980 to 1990 and population density in 1990. The appendix to this booklet lists alphabetically each incorporated city and town in Florida and the county in which it lies.
